Education

- **Shiv Nadar University, Chennai:** B.Tech in Artificial Intelligence and Data Science 2023 – Present
CGPA: 7.9 | Coursework: DSA, Machine Learning, DBMS, OOP
- **Maharishi International Residential School:** Class XII (CBSE) 2021 – 2023 | 90.8%

Experience

- **CandiClie Consultancy — Full Stack Developer Intern (Remote)** June 2026 – Present
 - Developing and extending full-stack MERN modules for a live CRM product, owning RESTful API design, MongoDB schema implementation, and React-based UI end-to-end.
 - Built event-driven backend features including an activity and notification system using a polling-based architecture with polymorphic entity references across modules.
- **Mayvel (previously SHLOKLABS) — Software Development Intern** June 2025 – July 2025
 - Built an internal IT knowledge base using React.js and Vite, consolidating documentation for 10+ tools into a single searchable interface.
 - Participated in Agile sprint planning; wrote structured test cases and bug reports during QA cycles covering unit and integration phases.

Projects

- **Web Connector** — GitHub: Jan 2026 – May 2026
React, Redux, Node.js, Express.js, JWT, MongoDB Atlas, Cloudinary, Render
 - Architected a production MERN social network with a REST API covering users, posts, and follows; deployed via GitHub-triggered CI/CD pipeline on Render.
 - Implemented stateless JWT authentication with Express middleware - chose JWT over sessions for horizontal scalability without shared session storage.
 - Built a multi-type file upload service (images, PDFs) using Cloudinary, with format validation restricting allowed file types per upload type
- **Computer Vision Image Search Engine** — GitHub: Dec 2025 – Jan 2026
Python, YOLOv8, Streamlit, JSON
 - Built a YOLOv8 inference pipeline extracting class labels, bounding-box counts, and confidence scores into a structured index; single-stage detection achieves sub-100ms per-frame throughput.
 - Designed a query engine with AND/OR boolean filters and per-class count thresholds, returning results in under 200ms on a 1,000-image dataset.
 - Decoupled the ML inference layer from query and UI layers — detection model can be swapped without touching search or frontend logic.
- **Lead Management System with Gemini AI** — GitHub: June 2026 – Present
React, Node.js, Express.js, MongoDB, JWT, Gemini 2.5 Flash API
 - Built a full-stack CRM lead management system enabling businesses to track, manage, and summarise leads through a dashboard with JWT-secured access and user settings.
 - Chose REST-based node-fetch over the Gemini SDK after SDK integration failed due to API key format incompatibility; built reusable prompt templates with explicit role, format, and length constraints for summary, email drafting, and next-action features.
 - Implemented server-side PDF and CSV export of all leads using PDFKit and json2csv, streamed directly to the browser without saving files on disk.

Technical Skills

- **Languages:** Python, JavaScript, C/C++, Java, SQL
- **AI / ML:** Gemini 2.5 Flash API, YOLOv8, NumPy, Pandas, Jupyter
- **Frontend:** ReactJS, Redux, Vite, HTML, CSS
- **Backend:** Node.js, Express.js, REST API design
- **Databases & Tools:** MongoDB, SQL, Git, GitHub, Postman, VS Code

Certifications

- Building AI Assistants using OpenAI APIs — Coursera, 2025 Certificate | Project
- Introduction to Large Language Models (LLMs) — Coursera, 2025 Certificate
